

Kasim Elite Digital Global

Design System — documented from the live kasimempire.com code · 29 September 2026

Brand book

Kasim Elite Digital Global is a founder-led digital studio run by Kasim Magaji from Port Harcourt, Nigeria, working worldwide. Everything here is documented from the live code of kasimempire.com as it stands, not from a redesign. Where the code and the brand rules disagree, the token notes and the **Audit** section say so.

Brand foundations

- **Official name:** Kasim Elite Digital Global. Use it in the header lockup, footer, page titles, meta and legal lines. Never shorten it there.
- **Personal studio name:** Kasim Elite Digital Studio — used in the home hero to describe how Kasim works. It sits next to the official name; it does not replace it.
- **Shorthand:** KEDG, for interface labels and internal names only (e.g. the "KEDG systems" hero card).
- **Domain:** kasimempire.com. Contact is magajiqaseem@gmail.com and WhatsApp +234 708 008 3489.
- **Promise, in the site's own words:** fixed quotes, clear updates, deadlines kept. You work with Kasim directly.

Voice and content

- Write in the first person singular. "I design and build your website myself." Never "our team" or "we".
- State facts, not hype. Avoid words like "elite", "world-class" or "global standard" in body copy; the brand name carries the ambition.
- Headlines are sentence case: "How I work", "Hi, I'm Kasim Magaji."
- Prices are "from" prices: landing page from \$300, full website from \$800, motion from \$400, fintech UI from \$1,200.
- Only real proof. No invented clients, testimonials, retention rates or project counts. Concept work is labelled "Concept" on the image caption.
- Studio facts as the site shows them: "Independent since 2025", "3 years of training & hands-on practice", "Digital Concepts & Experiences", "Built for Global-Ready Brands".
- No emoji anywhere on the site.

Colour

The palette is black, gold, blue and white. In the code that is four families of tokens:

- **Black:** `ink` is the page. `vault` (a blue-black) is the alternate band for the ecosystem and About sections. Never add a third surface black; `black-050505` is a duplicate to remove.
- **Gold:** `gold` fills primary buttons and marks accents (eyebrows, numbers, hairlines, the active nav underline). `gold-hi` is the hover state and the colour of prices and stat numerals. Text on gold is always `on-gold`.

- **Blue:** `blue` is for fills and glows only — the globe, the portal glow, the "New" badge. It fails as text on black (2.09:1). For blue text or strokes on black use `blue-text`.
- **White:** `ivory` for headings and body text. `muted` for ledes, descriptions and resting nav links. `line` (gold hairline) and `line-soft` (neutral hairline) for all borders.
- Functional colours `status-live`, `trade-sell`, `trade-buy` and `form-error` sit outside the four-colour rule. Keep them to status and mockup data; never use them for brand surfaces.

Typography

- Two families, both from Google Fonts: **Cormorant Garamond** (500, 600, italic 500) for display and numerals, **Inter** (400, 500, 600) for everything else.
- Headings `h1` — `h3` are Cormorant Garamond 600 with -0.01em tracking and tight leading (1.02–1.12). Sizes are fluid `clamp()` values; the styles record their upper bounds.
- Body copy is `body` (Inter 17px/1.6). Intro paragraphs use `lede` in `muted`, capped at 58ch.
- Buttons and nav use `ui`. Captions and tags use `caption`. The gold subline under the wordmark uses `eyebrow`.
- Prices and stats use `stat` in `gold-hi` — the serif gives numbers their character.

Layout and spacing

- Content sits in `.wrap : max wrap` (1180px) with a fluid side gutter from `gutter-min` to `gutter-max`.
- Sections breathe: vertical padding runs from `section-pad-min` to `section-pad-max`; a section head keeps `section-head-gap` below it.
- Most layouts are two-column grids (1.05fr/.95fr for the hero; .9fr/1.1fr for pillars; 1fr/1.05fr for detail rows) that alternate image side with `.flip` and stack under `bp-tablet`.
- Card grids: store products 3-up → 2-up at `bp-narrow` → 1-up at `bp-phone`. The process list goes 5 → 3 → 1.
- Controls are at least `control-height` (52px); links and chips never drop below `control-height-compact` (44px).

Shape, depth and light

- Pills (`radius-pill`) for every button, chip and tag. `radius-lg` for media frames and cards.
- The signature treatment is the **shining border**: `shadow-signature` on every media frame, portrait and film screen, plus a slow gold "torch sweep" crossing it.
- The **underground touch-light** (`.floor`): a gold radial glow rising from beneath a section's bottom edge with a thin gold seam line. It is the brand's key visual — use it on the hero and closing sections, not everywhere.
- The **hero globe and orbit**: a blue sphere, a slow-spinning gold ring and two floating glass cards (`vault` at 88%, `blue-text` border at 35%, `shadow-float`).
- Imagery is Kasim's own: portraits in the blue-and-gold and gold suits, real photo retouches, real AI films. Show photos as provided — never redraw or restyle them.

Motion

- One orchestrated entrance: hero copy rises 14px and fades in over .9s on `cubic-bezier(.2,.7,.2,1)`, staggered by .08s per line; the floor light rises over 1.8s.
- Ambient loops are slow: orbit ring 60s per turn, float cards bob 8px over 7–8s, the portal breathes over 6.5s, the ribbon scrolls over 55s and pauses on hover, the torch sweep crosses every 5s.
- Hover transitions are .2s on colour, border and shadow only.
- Every animation sits inside `prefers-reduced-motion: no-preference`. Keep it that way.

Iconography

The site uses no icon font or icon set. Marks are drawn in CSS (status dots, check ticks in `.gets`, the ribbon diamond, the hamburger) or as inline SVG (orbit rings, the cave scene, mockups). Keep new icons as simple CSS or inline SVG in `gold` or `blue-text`.

Accessibility

- Every page has a skip link, `lang="en"`, one `h1`, a `main` landmark and alt text on every image.
- The focus ring is 2px solid `gold-hi` with 3px offset — keep it on every interactive element.
- All text pairs listed in the colour notes pass WCAG AA (4.5:1) on `ink` and `vault`. `blue` never carries text.
- Tabs support arrow keys; filters use `aria-pressed` and announce the result count in a live region; the menu toggles `aria-expanded` and closes on Escape.
- A `<noscript>` block on every page keeps the nav visible without JavaScript.

Colour tokens

ink #030303

Page black (--ink). Body background, header at 86% opacity, text on gold buttons' siblings. The live CSS uses #030303; the brand spec says #050505 — see Audit.

gold #d4af37

Brand gold (--gold). Primary button fill, eyebrows (hero-place), step numbers, hairline accents, active nav underline, ribbon diamonds. As text on ink: 9.81:1.

blue #0038a8

Brand electric blue (--blue). FILLS AND GLOWS ONLY: globe, portal glow, 'New' badge, tag backgrounds at 30–35% alpha. Never text on ink — 2.09:1 fails.

ivory #ffffff0

The site's white (--ivory). Headings and body text on ink and vault (20.44:1). Brand spec says pure white #FFFFFF — see Audit.

line rgba(212,175,55,0.22)

Gold hairline (--line). Borders of media frames, price table top rule, mobile menu border, chip outlines.

on-gold #0a0700

Text on gold fills (literal in .btn-gold, .badge, done steps). 9.57:1 on gold. Not a declared variable yet.

black-050505 #050505

Second black, hard-coded in index.html ribbon, hero photo backing and before/after 'After' label. Duplicate of ink — consolidate.

status-live #3ddc84

OFF-PALETTE green: 'Available for new projects' dot, 'Live' labels, bid prices, success lines in code mockups. 11+:1 on ink.

form-error #ffb4bd

OFF-PALETTE pink-red: contact-form validation message text.

blue-bright #3b6bff

Extra blue: even bars in the hero 'Founder-led delivery' chart, blue pillar glow. Not a variable.

vault #060a1c

Deep blue-black (--vault) for alternate bands: the services ecosystem band and the About band. Carries ivory and muted text.

gold-hi #f1d27a

Light gold (--gold-hi). Hover state of gold buttons, prices, stat numerals, figcaption text, focus ring (2px solid). On ink: 13.99:1.

blue-text #7fa2ff

Readable blue (--blue-text) for text and strokes on black: 'Specialty' tag, note chips, code emphasis, float-card borders at 35% alpha. On ink: 8.36:1.

muted #a9aec0

Secondary text (--muted): ledes, descriptions, nav links at rest, footer. On ink 9.33:1, on vault 8.90:1, on field 8.94:1.

line-soft rgba(255,255,240,0.08)

Neutral hairline (--line-soft). Section dividers, list row rules, header bottom border, card outlines.

field #07091a

Form control background (literal in .field input/select/textarea). Not a declared variable yet.

white #ffffff

Pure white literals (#fff, rgba(255,255,255,...)) in the ribbon, hero proof line, 'New' badge text and gallery labels. Duplicate of ivory — consolidate.

trade-sell #ff7b8a

OFF-PALETTE red: ask prices and the Sell button in the order-book mockup (also #ff9aa6 text). Mockup data only.

trade-buy #1f8f55

OFF-PALETTE green fill: the Buy button in the order-book mockup.

royal-legacy #1e3a8a

Legacy royal blue from the old token set, still present as rgba(30,58,138,...) in the store author card gradient. Retire.

Typography

Families: **Cormorant Garamond** (display), **Inter** (text), system monospace (code). Sizes are the upper bound of each fluid clamp().

Display (Cormorant Garamond)

h1-hero-home

62px / 1.04 · 600

Hi, I'm Kasim Magaji.

Home hero h1: clamp(38px, 4.6vw, 62px), max-width 17ch. Set by the page-level hero-proof block in index.html, overriding the global h1.

h1

76px / 1.02 · 600

Founder-led digital studio

Global h1: clamp(40px, 6.4vw, 76px). Final-CTA h2 uses clamp(40px, 6vw, 72px).

h1-page

70px / 1.02 · 600

Services

Inner page hero (.page-hero h1): clamp(42px, 5.8vw, 70px), max-width 16ch.

h2

56px / 1.06 · 600

How I work

Section headings: clamp(34px, 4.6vw, 56px). Group heads on services/portfolio go to 60px.

h3

34px / 1.12 · 600

Website Development

Sub-heads: clamp(26px, 2.8vw, 34px). Detail rows use clamp(28px, 3.2vw, 40px).

stat

40px / 1 · 600

\$300

Numerals and short facts in gold-hi: .facts dd clamp(30px, 3.4vw, 40px), portrait badge 34px, bundle price 40px.

row-title

26px / 1.12 · 600

Landing page

Price-row names, principle and role titles.

ribbon

26px / 1.2 · 500

Website Development

Scrolling service ribbon: clamp(20px, 2.2vw, 26px), white at 72%.

Text (Inter)

lede

19px / 1.6 · 400

You work with me directly, with a fixed quote and clear updates.

Intro paragraphs: clamp(17px, 1.5vw, 19px), muted, max-width 58ch.

body

17px / 1.6 · 400

I design and build your website myself.

Base body text, ivory. Drops to 16px under 600px.

label-strong

17px / 1.4 · 600

Fixed quotes

List item titles (.svc strong, .process b, product titles).

ui

15px / 1.2 · 600

Start a project

Buttons (600) and nav links (400, muted). Header button 14px.

small

14px / 1.5 · 400

Available for new projects

Status lines, footer, chapter lists, captions under media.

caption

12.5px / 1.4 · 400

Concept work

Figcaptions, case tags, table heads.

eyebrow

11.5px / 1.2 · 500

DIGITAL GLOBAL

Brand-name subline under the wordmark, in gold. Uppercase is typed, not transformed.

Code

code

12px / 1.75 · 400

```
<section class="hero">
```

Live code-window mockups on the services pillar images.

Spacing, radius, shadow, breakpoints

Spacing & layout

wrap	1180px	Max content width (--wrap).
gutter-min	20px	Side padding at phone width: --gutter clamp(20px, 5vw, 48px).
gutter-max	48px	Side padding at desktop (upper bound of --gutter).
section-pad-min	80px	Section vertical padding lower bound: clamp(80px, 11vw, 140px).
section-pad-max	140px	Section vertical padding upper bound.
section-head-gap	64px	Space under a section head: clamp(40px, 6vw, 64px).
header-height	72px	Sticky header row height; also scroll-padding-top 84px.
gap-6	6px	Tight grids: tiles, before/after pairs.
gap-8	8px	Chip rows, filter bars, list gaps.
gap-10	10px	Most common gap: button icon gap, chip rows, product cards internal.
gap-12	12px	Brand lockup gap, form actions, product body.
gap-14	14px	Hero action buttons, step rows.
gap-16	16px	Film grid, gallery grids, next-steps list.
gap-18	18px	Form field stack, process grid.
gap-22	22px	Card padding (product body, cover).
control-height	52px	Buttons and form fields (min-height).
control-height-compact	44px	Header button, touch-target floor for links and chips (46px chips).

Radius

radius-pill	999px	Buttons, chips, tags, filters, badges — the dominant shape.
radius-lg	22px	--radius-lg. Media frames, product cards, portraits, film screen.
radius-bundle	28px	The store bundle panel only.
radius-card	16px	Direct-contact cards, portrait badge.
radius-float	14px	Hero float cards, live display cards, gallery frames.
radius-field	12px	Form inputs, workflow step rows, copy cards, menu button.
radius-sm	10px	--radius-sm is DECLARED but never used; 10px appears as a literal on frames and trade buttons.
radius-tile	8px	Skip link, motion track, small tiles.

Shadow

shadow-btn-gold	<code>0 10px 40px -12px rgba(212,175,55,0.65)</code>	Gold button glow.
shadow-signature	<code>0 0 0 2px rgba(212,175,55,0.55), 0 0 25px -2px rgba(212,175,55,0.35), inset 0 0 15px rgba(0,56,168,0.45)</code>	Signature 'shining border' on every media frame, portrait and film screen.
shadow-portal	<code>0 0 0 1px rgba(212,175,55,0.55), 0 40px 90px -30px rgba(0,0,0,0.95), 0 0 80px -20px rgba(0,56,168,0.6)</code>	Hero arched photo portal (breathes to a gold glow).
shadow-float	<code>0 30px 60px -20px rgba(0,0,0,0.8)</code>	Floating glass cards over the hero globe.
shadow-field-focus	<code>0 0 0 3px rgba(212,175,55,0.2)</code>	Form control focus halo, with a gold border.

Breakpoints

bp-narrow	<code>1040px</code>	max-width: nav gap tightens, process goes 3-up, store 2-up.
bp-tablet	<code>880px</code>	max-width: hamburger menu, all two-column grids stack.
bp-phone	<code>600px</code>	max-width: sticky mobile CTA bar, full-width buttons, body 16px.

Layers

z-header	<code>50</code>	Sticky header.
z-mobile-bar	<code>60</code>	Mobile CTA bar.
z-skip	<code>100</code>	Skip link.

Components

Button

Pill-shaped call to action in two variants: `.btn-gold` (primary) and `.btn-line` (secondary).

Markup: `<a class="btn btn-gold">` or `<a class="btn btn-line">`. Buttons are almost always links (WhatsApp, anchors). On forms use `<button class="btn btn-gold">` inside `.form-actions`, which strips the default border.

Spec: min-height `control-height` 52px, padding 0 26px, `radius-pill`, Inter 600 15px, +0.01em tracking, 10px icon gap. Gold fill with `on-gold` text and `shadow-btn-gold`; hover to `gold-hi`. Line: 1px ivory border at 28%, ivory text; hover to a `gold` border and `gold-hi` text. Transitions .2s on colour, border and shadow.

Compact: inside `.head-cta` the button drops to 44px high, 0 20px, 14px. In `.mbar` it flexes to fill.

Do: one gold button per group, the line button beside it. Label with a verb ("Start a project", "See starting prices"). **Don't:** use `blue` as a button fill, or put two gold buttons side by side.

Chip

Pill labels in five roles: filters, case tags, role chips, badges and note chips.

- **Filter / jump** (`.filters button`, `.jump a`): 46px pill, `line-soft` border, `muted` 500 15px. Selected state `aria-pressed="true"` inverts to an `ivory` fill with `ink` text.
- **Case tag** (`.case-tag`): 12.5px `gold-hi` on a `line` outline — use "Concept" for concept work.
- **Role chip** (`.roles li`): 14.5px `muted` on `line-soft`; the first chip is highlighted in `gold / gold-hi`.
- **Badge** (`.badge`): 12px 600 `on-gold` on `gold`, absolutely placed on product covers; `.badge.new` is `blue` with white text.
- **Note chip** (`.notes li`): 13px `blue-text` on `blue` at 30%.

Don't: use "Best seller" or unverifiable claims on badges.

ContactCard

Large tappable cards for direct contact channels.

Markup: `.direct > a > b + span`. The first card is the preferred channel.

Spec: 20px 22px padding, `radius-card`, `line-soft` border, ivory at 2%; hover to a `gold` border. First card: `line` border and gold at 6%. Title 16px, detail 15px `muted`, long emails break.

FactsStrip

A strip of studio facts: big serif value over a small label.

Markup: `dl.facts` (add `.facts--row` for 4-up on desktop) of `div > dt + dd`. The DOM puts the label first for screen readers; CSS flips the order visually. Add `.facts-word` when the value is words, not a number.

Spec: 2 columns, 4 at $\geq 881\text{px}$ with `.facts--row`; each cell has a `line` top rule and 16px padding. Value is `stat` in `gold-hi`; label 14px `muted`.

Rule: only the approved studio facts. Never retention rates, project counts or ratings.

Footer

Three-column footer with brand, links and a base line.

Markup: `footer.footer > .wrap > .foot-grid` (brand column + two `div > h4 + ul`) and `.foot-base`.

Spec: `line-soft` top border, 36px padding plus safe area, 14px `muted`. Column heads Inter 600 14px `gold`; links `muted` → ivory on hover with 6px vertical padding. Grid 1.4fr/1fr/1fr → 2 columns with the brand full width under 880px.

Rule: the base line carries the official name and the domain.

FormField

Labelled form controls for the contact enquiry.

Markup: `form.form > .field > label + input|select|textarea (+ .hint)`. Pair fields with `.two` (stacks under 600px). One `p.form-error#f-error` (live message) above `.form-actions`.

Spec: 52px min height, 14px 16px padding, `radius-field`, ivory border at 18%, `field` background, Inter 16px. Focus: `gold` border + `shadow-field-focus`. Select arrow is drawn in `gold` with gradients. Labels 15px 500; hints 13.5px `muted`; error 14.5px `form-error`.

Behaviour: `app.js` validates name and message, focuses the first gap, then opens WhatsApp or email with a composed message — there is no backend.

HeroIntro

The left column of the home hero: place line, personal h1, lede, two buttons, availability status and a proof line.

Markup: `.hero-copy` > `p.hero-place`, `h1`, `p.lede`, `.hero-actions`, `p.hero-status` (with an `<i>` dot), `ul.hero-proof`. The right column is the `.orbit` figure (globe, spinning ring, arched `.hero-photo`, two `.float` cards).

Spec: place line 15px `gold`; h1 is `h1-hero-home`; lede in `muted`; status dot 8px `status-live` with a 4px halo; proof line 13.5px white at 66% with 4px `gold` dots placed after each item so wrapped lines never start with a dot.

Motion: each child rises 14px and fades in (.9s, staggered .08s) under reduced-motion: no-preference.

Copy rule: first person, the official name elsewhere; "Kasim Elite Digital Studio" appears only here.

MediaFrame

The framed picture used for every image, film and mockup: rounded, gold-bordered and softly lit.

Markup: `figure.row-visual` (also `.pillar-art`, `.case-visual`, `.portrait`, `.film` `.screen`) > `img` or `video` or a mockup, an optional `span.sweep` for the torch sweep, and a `figcaption` that sits BELOW the picture.

Spec: `radius-lg`, 1px `line` border, background #050814, `shadow-signature` (2px gold ring + gold glow + inner blue glow). The sweep is a 16% `gold-hi` diagonal band crossing every 5s. Variants: `.wide` (16:10), `.cine` (letterbox bars), `.arch` portrait (arched top).

Do: show photos exactly as provided. Label concept work in the caption. **Don't:** lay captions over the picture (fixed in the last CSS pass).

MobileBar

Sticky bottom action bar shown only on phones (≤600px).

Markup: `div.mbar` with two `.btn` links. Body gets extra bottom padding so content never hides under it.

Spec: fixed to the bottom, `z-mobile-bar`, `ink` at 94% with blur, `line` top border, 12px 16px padding plus the safe-area inset. Buttons flex equally at 48px high, 14.5px.

NextSteps

Numbered "what happens next" list on the Contact page.

Markup: `ol.next > li > b + text` . Numbers come from a CSS counter inside a 32px circle with a `gold` border and `gold` numeral.

Spec: 40px number column, 12px gap, 16px between items; step title ivory 600, detail 15.5px `muted` .

Note: styles.css also defines a five-step `.process` timeline (Cormorant numerals joined by a gold hairline) that no page currently uses.

PriceRow

Starting-price table rows: service name, what's included, price.

Markup: `.price-table > .price-row > b + p + strong` , followed by `p.price-note` .

Spec: grid 1.1fr / 1.6fr / auto, 24px vertical padding, `line` top rule on the table, `line-soft` between rows. Name is `row-title` , description 15.5px `muted` , price Inter 600 19px `gold-hi` . Under 880px the description wraps under the name.

Rule: always "from" prices; fixed quotes follow the first call.

ProductCard

Store product card: a typographic cover, details and a buy button.

Markup: `article.product[data-cat] > .cover.c-<kind> ( .kind , .title , optional .badge ) + .product-body ( h3 , p , .price with strong and optional s , .btn )` . Book products use `.cover.c-book` with the real cover image.

Spec: `radius-lg` , `line-soft` border, ivory at 2%. Covers are 4:3 with a dark gradient per category (`c-tpl` , `c-brand` , `c-seo` , `c-ai` , `c-ads` , `c-social`) and a gold glow rising from the bottom — a small version of the floor light. Title is Cormorant Garamond up to 30px; body title Inter 600 17px; price Inter 600 24px `gold-hi` .

Grid: `.products` 3-up → 2-up → 1-up. Filter with `.filters` buttons and `data-cat` .

Ribbon

A slow-scrolling band of service names between sections (home page).

Markup: `.ribbon > .ribbon-track > ul` twice (the copy marked `aria-hidden`) so the loop is seamless.

Spec: 20px padding, `line` rules top and bottom, a black-to-deep-blue-to-black gradient with fade-out edges. Items are `ribbon` style, separated by a 7px rotated `gold` square with a glow. Scrolls one set width every 55s, pauses on hover; with reduced motion it wraps as a static list.

Note: its CSS lives in a page-level block in index.html and uses literal `#050505` — see Audit.

ServiceList

A ruled list of services with a description and a starting price.

Markup: `ul.svc > li > strong + p + em`. Add `li.featured` to append a "Specialty" tag (Inter 600 11.5px, `blue-text` on `blue` 35%).

Spec: two-column grid (text | price), 18px vertical padding, `line-soft` rules above each row and below the last. Title `label-strong`, description 15.5px `muted`, price 14px `gold-hi`. Under 600px the price drops beneath the text.

SiteHeader

Sticky site header: brand lockup, six-link nav and a compact gold button.

Markup: `header.head > .wrap` holding `a.brand` (emblem image + `.brand-name` with a `<small>` subtitle), `nav.nav#nav > ul`, `.head-cta` and a `button.menu` (hamburger, shown under `bp-tablet`).

Spec: 72px row (`header-height`), `ink` at 86% with a 14px backdrop blur, `line-soft` bottom border, `z-header`. Wordmark is Cormorant Garamond 19px; subtitle "DIGITAL GLOBAL" is Inter 500 11.5px, 0.18em tracking, `gold`. Links are 15px `muted`, ivory on hover; the current page gets `aria-current="page"` and a 2px `gold` underline.

Mobile (≤880px): the nav becomes a full-width drop panel under the header, links 18px ivory with `line-soft` separators; the header button hides and `.mbar` takes over under 600px. `app.js` toggles `aria-expanded` and closes on Escape or link click.

Do: keep the official name "Kasim Elite Digital Global" in the lockup.

Assets

The KE emblem and full logo, copied as-is from the site. Never redraw, recolour or crop them.

- `logo.png` — master logo with transparency (600×505). Use on black.
- `img-logo-full.webp` — full logo on its black square (720×720), used on the About portrait card and share images.
- `img-logo-emblem.webp` — the small KE emblem (260×160) used at 58px wide in the header and footer lockup, beside the Cormorant wordmark "Kasim Elite" and the gold subline "DIGITAL GLOBAL".

Kasim's own portraits. Use them exactly as provided — no redrawing, recolouring or AI alteration.

- `profile.jpg` — blue and gold suit at the studio desk (900×1125). The home hero photo, shown in the arched portal with `shadow-portal`.
- `img-kasim-portrait.webp` — portrait crop (560×700) for cards and the store author block.

Audit — what the code actually does

Snapshot of the live repository (main @ 5edde2c), 29 September 2026. Nothing in the site was changed for this audit.

Colour

- **Two blacks.** The declared token is `ink` `#030303`, but `#050505` (the black in the brand spec) is hard-coded 13 times — the ribbon, the hero photo backing and the gallery "After" label.
- **Two whites.** The declared text colour is `ivory` `#FFFFFF0` (slightly warm). Pure white appears as `#FFF/#FFFFFFF` and `rgba(255,255,255,...)` in the ribbon, hero proof line, the "New" badge and gallery labels. The brand spec says pure white.
- **Blue sprawl.** Beyond `blue` and `blue-text` there are ten more blues as literals (`#3B6BFF`, `#5E86FF`, `#1A4BD1`, `#12308A`, `#071A55`, `#0A1336`, `#061A3A`, `#08123A`, `#0B0F2A`, `#050814`) — mostly gradient stops for the globe and store covers — plus the retired royal blue `#1E3A8A` still inside the store author card.
- **Greys outside the palette.** `muted` `#A9AEC0` is the site's secondary text; portfolio adds `#C9CDD8` for story text.
- **Functional colours.** Green `#3DDC84` (status dot, "Live", bids, success), reds `#FF7B8A` / `#FF9AA6` / `#FFB4BD` (sells, form errors) and `#1F8F55` (Buy button). These break the black-gold-blue-white rule, though they do a real job.
- In total there are 47 distinct hex values and 14 `rgba` base colours across the CSS.
- **Gold is consistent:** `#D4AF37` and `#F1D27A` are used everywhere; the old `#C9A84C` is gone.

Typography

- Fonts are consistent: Cormorant Garamond + Inter on all 7 pages, one Google Fonts link each.
- 12 different fluid `clamp()` sizes for display text and 17 fixed small sizes between 11px and 19px (14px, 15px, 15.5px, 14.5px and 13.5px all compete as "small").
- The global `h1` (76px, 15ch) is overridden on the home page by an inline block (62px, 17ch), so the home hero and inner page heroes follow different rules.
- Only three weights are used (400, 500, 600), which keeps it disciplined.

Spacing, radius and shadow

- No spacing scale. Section padding and gutters are consistent `clamp()` values, but gaps use 14 different pixel values (2–36px).
- `--radius-sm` is declared and never used. 12 other radii appear as literals.
- Shadows are all literals; the signature border is defined once and shared well.

CSS structure

- `styles.css` (44 KB) has grown by appending: a "Restoration block" and a "Fix" block at the end override earlier rules (figcaptions are positioned absolutely, then reset to static).
- Page-level `<style>` blocks: 2 in `index.html` (ribbon, hero proof), 2 in `portfolio.html` (~12 KB of portfolio-only mockup CSS). 82 inline `style=""` attributes across pages (31 on portfolio).
- **Name collisions:** `.steps` means a workflow mockup list in `styles.css` and a 3-card "how it works" grid in `store.css`. `.head` is both the sticky header and the motion-track playhead, so the playhead inherits the header's blur and border.
- One class used but never styled: `.nx-track`.

Broken references

- `index.html` asks for `img-showreel-poster-vertical.webp`; the repo has `img-showreel-poster-1.webp`.
- `services.html` asks for `ai-keynote-v2.mp4`; the repo has `ai-keynote-v2-1.mp4`.
- `services.html` asks for five `poster-*.webp` files; the repo has `.jpg` stills with other names (`ai-mars.jpg` etc.).
- `app.js` checks for `kedg-showreel.mp4` while the page plays `kedg-showreel-3.mp4`.

Accessibility — mostly strong

- Passing: skip links, `lang`, single `h1`, `main`, alt text on all 48 images, visible focus ring, reduced-motion guards on every animation, keyboard tabs, live filter count, 44px+ targets.
- Watch: `blue` (`#0038A8`) must stay off text (2.09:1). The ribbon pauses on hover but not on keyboard focus.

Components found

Button (gold, line, compact), site header + mobile menu, mobile CTA bar, hero intro, contact next-steps list, chips/tags/filters/badges, media frame, facts strip, service list, price row, product card, store bundle panel, form field, direct contact card, footer, scrolling ribbon, and bespoke live mockups (code window, order book, workflow, motion storyboard, copy before/after, multilingual list).

Unused CSS

- The five-step `.process` timeline is styled in `styles.css` but no page uses it now.

Recommendations — for a later consistency pass

None of these have been applied. They are ordered by how much consistency each one buys.

1. Settle the four colours

- Pick **one black**. Either make `ink #050505` (matching the brand spec) or replace the `#050505` literals with `var(--ink)`. One value, used everywhere.
- Pick **one white**. The spec says `#FFFFFF`; the site says ivory `#FFFFFF0`. Choose one and point every white literal at it.
- Collapse the blues to three tokens: `blue` (fill), `blue-text` (text/strokes), `blue-deep` (a single gradient stop for globe and covers). Remove `#1E3A8A` for good.
- Add the missing variables the CSS already uses as literals: `--on-gold #0A0700` and `--field #07091A`.
- Decide a policy for functional colours: keep green and red only inside mockups and the status dot, as named tokens (`--status-live`, `--danger`), never as brand colour.
- Express `muted` and `#C9CDD8` as white at fixed opacities (e.g. 66% and 80%) so the palette is truly four colours.

2. A small type scale

Reduce to six text sizes and five display sizes, each a variable: `--fs-caption 12.5px`, `--fs-small 14px`, `--fs-ui 15px`, `--fs-body 17px`, `--fs-lede 19px`, plus display `h1`, `h1-page`, `h2`, `h3`, `stat`. Move the home hero `h1` override into `styles.css` as `.hero h1` so home and inner pages share one rule set.

3. Spacing and radius tokens

- An 8-step spacing scale: 4, 8, 12, 16, 24, 32, 48, 64 (as `--space-1 ... --space-8`), mapping 10 → 8 or 12, 14 → 12 or 16, 18/22 → 16/24.
- Three radii: `--radius-pill 999px`, `--radius-lg 22px`, `--radius-md 12px`. Use the unused `--radius-sm` or delete it.
- Name the shadows: `--shadow-signature`, `--shadow-btn`, `--shadow-float`.

4. Tidy the CSS

- Fold the "Restoration" and "Fix" blocks into the rules they override, so each selector is defined once.
- Move the index and portfolio `<style>` blocks into `styles.css` (or a `portfolio.css`), and turn repeated inline styles (`margin:0`, bar heights) into classes.

- Rename the collisions: `.steps` → `.flow-steps` (mockup) and `.buy-steps` (store); `.track .head` → `.track .playhead`.
- Style or remove `.nx-track`.

5. Fix the broken media

Rename or re-point the six missing files listed in the Audit, and make app.js check the same showreel file the page plays.

6. Accessibility polish

Pause the ribbon on `:focus-within` as well as hover. Keep `blue` off text; keep the 2px `gold-hi` focus ring on anything new.

7. Brand naming in code

Keep "Kasim Elite Digital Global" as the name in `<title>`, meta, header and footer. Use "Kasim Elite Digital Studio" only in personal, first-person copy such as the hero.
